2025 myaamia kiilhswaakani

The Myaamia lunar calendar connects the observation of lunar cycles to ecological changes in our environment. Each lunar month is named for an ecological event that is usually observed during that period of time. A lunar month is approximately 29.5 days long. In order to account for the half day, the calendar alternates between months that have 29 days and months with 30 days.

A lunar year is approximately 354 days long, which is eleven days shorter than the solar year. In order stay connected with seasonal ecological changes, the calendar needs to be adjusted approximately every three years by adding a thirteenth moon called waawiita kiilhswa ‘lost moon’. The 2025–26 calendar will have twelve months and begins with mahkoonsa kiilhswa. Because the lunar year is shorter, the Gregorian date for weehki-kihkatwi ‘Myaamia New Year’ varies, but it always occurs at the beginning of mahkoonsa kiilhswa. With the addition of waawiita kiilhswa, weehki-kihkatwi occurs on February 1st on the Gregorian calendar.

This calendar includes Gregorian dates in the lower lefthand corner of each day so that users can connect the Myaamia lunar calendar to the Gregorian solar calendar.

Calendar events are subject to change; visit miamination.com/cultural-resources-office for updates.

Some common terms associated with the Myaamia lunar calendar are listed below.

eelaamini-kiišikahki	Sunday	saakiwa kiilhswa	New Moon
nkotakone pooni-kiišikahki	Monday	napale kiilhswa	First Quarter Moon
niišakone pooni-kiišikahki	Tuesday	waawiyiisita	Full Moon
nihsokone pooni-kiišikahki	Wednesday	napale neepiki	Last Quarter Moon
niiyakone pooni-kiišikahki	Thursday	myaalisiwa	Waning Crescent
yaalanokone pooni-kiišikahki	Friday	keešaakosita kiilhswa	Waxing Phases
kaakaathsokone pooni-kiišikahki	Saturday	peemineeta kiilhswa	Waning Phases
weehki-kihkatwi	New Year	pahsaahkaahkanka	Solstice

kiilhsooki

For Myaamiaki ‘Miami people’ the moon helps us track the progress of a month. In Myaamia, we describe the moon growing like a plant during keešaakosita kiilhswa ‘growing/waxing phases’ and then dying away during peemineeta kiilhswa ‘dying away/waning’ phases.

Each month, the moon starts out as a thin sliver called saakiwa kiilhswa, which refers to the sprouting moon. For the next eleven evenings, the moon grows from saakiwa to waakhšinka kiilhswa ‘crescent moon’, napale kiilhswa ‘half moon’, naawi waawiyiisita ‘almost full’, and finally to waawiyiisita ‘full moon’.

For the next fourteen days, you are more likely to see peemineeta kiilhswa ‘waning phases’ in the morning. Over this next period, kiilhswa will become napale neepiki ‘half dead’ and myaalisiwa kiilhswa ‘seriously ill moon’. Eventually kiilhswa dies away and goes completely dark, and then sprouts again during the next moon.

mihši neewe

This calendar is a culmination of much work made possible by tremendous support from several individuals and organizations. We would like to express our thanks to the Miami Nation and Miami University for supporting our efforts through the Myaamia Center at Miami University. A list of all the individuals who have worked on this calendar over the years can be found at MiamiOH.edu/myaamiacenter.
